**Subject:** WEPCO Fly Ash

Hi Jennifer,

My correspondence is regarding WE energies in Oak Creek WI. I know you have been to our former home, and have also been to the plant a couple times looking for evidence of coal dust or fly ash. You said you and Kushal found nothing. The evidence is apparent, especially in winter. The dark color of coal dust and gray fly ash covers surrounding fields contrasting with the white snow and neighborhoods in the area. It would be very easy to go to 1000 different random spots and collect samples of snow to have them analyzed. Im certain the results would be conclusive. My attorney and I are joining forces with a very large law firm in Wisconsin. There are 33 other people so far retained by this law firm not including my family of 6, 24 whom have cancer, all in the same neighborhood. Men, women and children. The EPA stands for Environmental Protection Agency. I will boldly and angrily tell you this, the environment needs little protection. People however need and deserve protection, plain and simple. Wepco continues to cause immeasurable damage to peoples health by polluting the air and dump coal waste (fly ash) into concrete, drywall and other materials in which goes directly into peoples lungs. In return WEPCO gets a small fine by the EPA which is nothing more than a hand slap. I will stop at nothing to bring this to a national level. Human beings deserve to know what they are breathing in. The companies the EPA are suppose to be monitoring are killing people and the truth will be told.

Thank you  
Bill Pringle
